

Speaking from Experience

To the editor:

At a recent inspection of a multi-unit property, insurance was about to be denied due to 17 discrepancies considered hazardous by the insurance agent. Fifteen were resolved within two days, and the remaining two within the week. However, the property was classified as "Suspect."

I have no idea what the discrepancies were at MGH that caused it to be threatened with being cut off from all Medicare payments, and I have no idea if they have been remedied.

Within the past three years, I have had seven different occasions to be treated at the MGH, spending a total of 29 days there. From my personal experience, and in my opinion, their ability to handle emergencies and complicated medical problems expeditiously, go without question. MGH is an extremely valuable asset to southern Marin County, and should remain under Sutter control.
